XXXV. Some New Properties in Conic Sections, discovered by Edward Waring, M. A. Lucasian Professor of the Mathematics in the University of Cambridge, and F R. S. to Charles Morton, M. D. Sec. R. S.

THEOR. I.

Read June 21, SIT ellipsis APBQCRDSET, &c. describantur circa eam duo polygona [TAB. XIII. Fig. 1.] (abcdef, &c. pgrstv, &c.) eundem laterum numerum habentia, & quorum latera ad respectiva contactuum puncta (APBQCRDS,&c.) in duas æquales partes dividuntur, i. e. aA = Ab, bB = Bc, cC = Cd, &c. pP = Pq, qQ = Qr, r R = R s, &c. & erit summa quadratorum ex fingulis unius polygoni lateribus æqualis fummæ quadratorum ex fingulis alterius polygoni lateribus, i. e.

a $b^2 + bc^2 + cd^2 + de^2 + ef^2 + , &c. = pq^2 + qr^2 + rs^2 + st^2 + tv^2 + , &c.$ Cor. Ducantur lineæ AB, BC, CD, DE, EF, &c. PQ, QR, RS, ST, TV, &c. & erit

A B² + BC² + CD² + DE² + EF² + &c. = PQ² + QR² + RS² + ST² + TV² + &c.

Vol. LIV. C c THEOR.

[194]

THEOR. II.

Iisdem positis sit O centrum ellipseos, & ducantur lineæ OA, OP, OB, OQ, OC, OR, OD, OS, &c. erit

 $OA^{2} + OB^{2} + OC^{2} + OD^{2} + &c. = OP^{2} +$ $OQ^2 + OR^2 + OS^2 + &c.$

Cor. Ducantur etiam lineæ Oa, Op, Ob, Oq, Oc, Or, Od, Os, &c. & erit

 $Oa^{2} + Ob^{2} + Oc^{2} + Od^{2} + &c. = Op^{2} +$ $Oq^2 + Or^2 + Os^2 + &c.$

Hæc etiam vera funt de polygonis inter conjugatas hyperbolas eodem modo descriptis.

THEOR. III.

Sit conica sectio MPQRSTM &c. [Fig. 2.] cujus diameter sit AL, et ejus ordinata ML; sit M p = M v, & confequenter L p = L v.

Ducantur lineæ pq, qr, rs, st, tv, &c. quæ respective tangant conicam sectionem in punctis P, Q,

R, S, T, &c. & erit contentum

 $pP \times qQ \times rR \times Ss \times \&c. = Pq \times Qr \times Rs \times$ $St \times Tv \times \&c.$ vel, quod idem est, summa omnium hujus generis rationum (P p : P q, Qq : Qr,R r : R s, S s : S t, &c.) erit nihilo æqualis.

Cor. 1. Sit ellipsis PQRSTV &c. circa eam describatur quodcunque polygonum (pqrstuw, &c.),

[Fig.

[195]

[Fig. 3.] cujus latera respective tangant ellipsim in punctis P, Q, R, S, T, V, &c. & erit contentum

 $p P \times q Q \times r R \times s S \times t T \times v V \&c. = Pq \times r R \times s S \times t T \times v V \&c.$

 $Qr \times Rs \times St \times Tv \times Vw \times \&c.$

Cor. Ducantur lineæ PQ, QR, RS, ST, &c. & pro finibus angulorum WPp, QPq, RQr, QRr, SRs, TSt, &c. fcribantur respective a, p, b, q, c, r, d, s, &c. & erit

abcd &c. = pqrs &c.

Et fic de polygonis inter conjugatis hyperbolas in-

scriptis.

Idem verum est de polygono, cujus laterum summa vel area minima sit, circa quamcunque ovalem in sese semper concavam descripto, ut constat e nostra Miscell. Anal.

THEOR. IV.

Sit ellipsis PAQBRCSDTEVF, &c. [Fig. 4.] circa eam describantur duo polygona abcdef, &c. pqrstu, &c. eundem laterum numerum habentia; eorum latera ab, bc, cd, de, ef, &c. pq, qr, rs, st, tv, &c. respective tangant ellipsim in punctis A, B, C, D, E, F, &c. & P, Q, R, S, T, U, &c. & sit aA:Ab::pP:Pq, & bB:Bc::qQ:Qr & cC:Cd::rR:Rs & dD:De::sS:St, & sic deinceps. Et area polygoni abcdef, &c. æqualis erit areæ polygoni pqrstv, &c.

Cor. Duo parallelogramma (abcd & pqrs) circa datæ ellipseos conjugatas diametros (AC & BD; PR, QS) [Fig. 5.] descripta, crunt inter se æqualia.

Cc2 In

[196]

In hoc casu enim aA = Ab, bB = Bc, cC = Cd, dD = Da, & pP = Pq, qQ = Qr, rR = Rs, sS = Sp; & consequenter aA : Ab :: pP : Pq & bB : Bc :: qQ : Qr, & sic deinceps: ergo per theorema hæc duo parallelogramma erunt inter se æqualia, quæ est notissima ellipseos proprietas.

Idem dici potest de polygonis inter conjugatas hy-

perbolas eodem modo descriptis.

THEOR. V.

Rotetur conica sectio circa diametrum ejus (AL),

& fit MAM, &c. folidum exinde generatum; fint pq, qr, rs, st, tv, vw, wp, &c. [Fig. 6.] lineæ, quæ tangant folidum in respectivis punctis P, Q, R, S, T, V, W, &c. & erit contentum

 $p P \times q Q \times r R \times s S \times t T \times v V \times w W \times \&c. = P q \times Q r \times R s \times S t \times T v \times V w \times \&c.$

THEOR. VI.

Sit ellipsis APBQCR, &c. rotetur circa diametrum ejus BD; & circa conjugatas diametros (AC & BD, PR & QS) describantur elliptici cylindri (pqrs & acbd) [Fig. 7.] solidum generatum circumscribentes, & erunt hi duo cylindri inter se æquales.

Sint duo folida e truncatis conis composita, solidum generatum circumscribentibus, & quorum latera continuo

[197]

tinuo eâdem ratione ad puncta contactuum dividuntur; erunt hæc duo solida inter se æqualia.

Et sic de solidis inter conjugatas hyperboloides eo-

dem modo descriptis.

Facile constant plures consimiles conicarum sectio-

num proprietates.

Hujus generis proprietates affirmari possunt de infinitis aliis curvis, ut facile deduci potest e nostra Miscell. Anal.
